

# Diary

Morning at 10 clock, a small group (consisting of skilled painters and architects) collected before the dorm. The taxi took us to the Sto-Building in Vienna. We were greeted by two technicians and Robert Hetzl (Product Manager Sto). Robert Hetzl showed us the Sto-Building, which was built according to the passive house standard.

After the tour, we got work clothes. Four groups were formed and each group was given a project-wall. The two technicians explained the project and the thermal insulation composite systems. For today the base insulation was the subject. Step by step the technician gave us the instructions. After each instruction, the groups were able to perform the steps learned on their own wall. Since it is bound to the drying times, we could not continue to work on the wall after the training base. We cleaned up our job and cleaned the tool. This was followed by a PowerPoint-Presentation about the Sto-Company.
